

SMALL NICKEL BELTS - FOR HAND HELD MACHINES

KGS Telum®

KGS Flexis®

Application

Many flat glass customers benefit from KGS belts for small hand-held machines. Non-standard shapes, awkward cut-outs and door hinge returns can easily be finished without dedicated machines.

It is better to use a specialist wet belt machine for prolonged use, although many customers are satisfied using a dry belt machine.

These belts are often used to remove over-spray for HVOF & TBC Coatings.

Pulley Issues

Newer machines use a very small belt – 330x8 mm for those really difficult corners.

Flexibility - Due to the pulley size for these small belts KGS Flexis® is normally better than KGS Telum®.

Many KGS distributors can supply complete solutions with belts and machines from stock.

Tech-Tip

For longer life, try to grind on the free running belt – not the platen, and if possible - not on the pulley!
